BUREAU OF INDUSTRIAL ECONOMICS

Copper Controlled Materials

THIRD QUARTER 1979

ITA-9008-(79)-3
Issued February 1980

The statistics in this publication are based on a survey of manufacturers and represent total U.S. shipments of copperbase mill and foundry products. Estimates are included for

companies whose reports were not received in time for tabulation. A more complete description of this survey appears on page 5.

THIS REPORT INCLUDES DATA COMPARING DOMESTIC OUTPUT, EXPORTS, AND IMPORTS

SHIPMENTS OF COPPER CONTROLLED MATERIALS FROM BRASS MILLS, COPPER WIRE MILLS, FOUNDRIES, AND POWDER MILLS 1968 TO 1979 (In Thousands of Pounds)

Address inquiries concerning these figures to U.S. Department of Commerce, Bureau of the Census, Industry Division, Washington, D.C. 20233, or call Doris Pope, (301) 763-2528.

For sale by the Subscriber Services Section (Publications), Bureau of the Census, Washington, D.C. 20233, or any U.S. Department of Commerce district office. Postage stamps not acceptable; currency submitted at sender's risk. Remittances from foreign countries must be by international money order or by a draft on a U.S. bank. Price 25 cents per copy, \$1.25 per year.

Table 1. SUMMARY OF SHIPMENTS OF COPPER-BASE MILL AND FOUNDRY PRODUCTS

(Millions of pounds - metal weight)

Quarter and year	Total	Brass mill products		Copper wire mill products ¹			Brass and bronze foundry products ³	Copper-base powder mill products
		Alloyed	Unalloyed	Bare wire ²	Insulated communication wire	Other insulated wire		
1979								
Third quarter.....	1,525	433	266	46	206	417	142	15

¹Comparison of domestic manufacturers' shipments, export, and import codes for copper-base mill products appears in table 4.²Source: Bureau of the Census Report FT-410, U.S. Exports, Commodity by Country.³These values were derived by use of adjustment factors to exclude freight, insurance, and other charges incurred in moving goods to the port of export. This adjustment is made to convert the values to an approximation of the producers' value of exported goods, current adjustment factors (.9528 for industry group 335 relating to brass mill and copper wire mill products and .8318 for industry group 339 relating to copper-base powder mill products) are based on data for 1976 which are published in "Origin of Exports of Manufacturing Establishments," M76(AS)-8, appendix A.⁴Source: Bureau of the Census Report IM 145-X, U.S. Imports for Consumption and General Imports.⁵Apparent consumption is derived by subtracting exports from the total of net shipments plus imports.⁶This total does not include either insulated wire and cable products or brass bronze foundry products.

Table 4. COMPARISON OF DOMESTIC MANUFACTURERS' SHIPMENTS, EXPORT, AND IMPORT CODES FOR COPPER-BASE MILL PRODUCTS: 1979

Product	Exports of domestic merchandise (Schedule B)	Imports for consumption (TSUSA)
Copper mill products:

¹The import and export codes for this line do not include wire.

DESCRIPTION OF SURVEY

Scope of Survey—This survey includes firms engaged in manufacturing copper-base mill products.

Sampling Description—The statistics in this publication were collected on Bureau of Industrial Economics, **Copper Controlled Materials**, Form ITA-9008. The mailing panel for these surveys includes all known producers of brass mill products and copper-base powder, as well as those manufacturers who produce 95 percent of wire mill products. The data for wire mill products are inflated to represent 100 percent coverage.

Survey Error—The quarterly figures include estimates for respondents whose reports were not received in time for tabulation, as well as those establishments not included in the mailing panel. Such missing figures are "imputed" from prior reports and/or estimates and are generally limited to a maximum of 10 percent for any one item. Individual items with imputation greater than 10 percent are footnoted.

The imputation rate is not an explicit indicator of the potential error in published figures. The probable range of difference between the actual and imputed figures is unknown. The degree of uncertainty regarding the accuracy of the data, however, increases as the percentage of imputation increases. Figures with imputation rates above 10 percent should be used with caution.

Revision to Previous Period Data—Statistics for previous quarters may be revised due to receipt of corrected data from respondents, including late reports for which imputations were previously made as described above and other corrections. Figures which have been revised by more than 5 percent from previously published figures are indicated by footnotes.

Seasonal Adjustment—The data are not adjusted for seasonal variation.

EXPLANATION OF TERMS

Shipments—Shipments by brass and bronze foundries include both shipments for sale (to the trade) and shipments for own use. Shipments for own use represent copper and copper-base alloy castings for use by the reporting company or an affiliate, subsidiary, or parent company, and also include castings produced and consumed at the sale location in the production of finished products.

Shipments by brass mills, copper wire mills and copper-base powder mills include all controlled materials orders shipped: by the respondent for his own account, by other copper-controlled materials producers for the respondent's account, or by the responding company under toll arrangements for the account of controlled materials consumers.

COMPARISON OF EXPORT, IMPORT, AND DOMESTIC OUTPUT DATA

The Standard Industrial Classification (SIC) system used for domestic output and the statistical export and import com-

modity classifications were developed independently and are based on somewhat differing systems of classification. This results in considerable difficulty in comparing the three types of data for many commodity areas. The domestic output classification is based on type of industry; whereas, the export and import classification system is more materials oriented. Aside from the differences in the basic commodity classifications, there are additional problems involving import data, since there are a substantial number of imported commodities which are not produced in the United States or which are produced only in very small quantities and which, therefore, have no comparable domestic output classification. The relationships shown in this report should be considered only as approximations, since, in addition to those mentioned above, there are also the following problems affecting the comparability of the three sets of data:

a. *Valuation*—There are different methods of valuation for the three types of data.

Domestic Output—Valued at the point of production. It includes the net sales price, f.o.b. plant, after discounts and allowances, exclusive of freight charges and excise taxes.

Exports—Valued at the point of exportation. It includes the selling price, or cost if not sold, and inland freight, insurance, and other charges to the export point.

Estimated producers' values of exports have also been developed. These values more closely approximate the values reported for domestic output because they exclude freight, insurance, and other charges applied from the producing plant to the export point.

Imports—Valued at the first port of entry in the United States. It includes c.i.f. (cost, insurance, and freight), duty, and other charges to the import point.

b. *Duplication in Quantity and Value of Output*—Because producers' shipments of some commodities may be used as materials for incorporation into other commodities, combinations of data for such commodities may contain a certain amount of duplication. Thus, percentages of exports to output or imports to apparent consumption (output plus imports minus exports) at four-digit or broader levels may be understated. Where duplication is known to be substantial, the output data are appropriately noted in the table.

c. *Low-Valued Export and Import Transactions*—Commodity information is not shown for individual imports valued under \$251. For exports, commodity information is not reported for shipments individually valued under \$251 effective October 1969 and for shipments valued under \$100 prior to October 1969. This is believed to have only negligible effect on the statistics for most commodities.

d. *Manufacturers' Shipments, Not Specified by Kind*—The value of manufacturers' shipments at the four-digit industry

level often includes a small amount which is not distributed among the individual five-digit product classes. Export and import percentages at the more detailed levels might, therefore, be slightly overstated.

e. *Time Lag Between Output and Exports*—There will be a lag between the time a commodity is produced or shipped by the producer and the time it is actually exported, especially when intermediaries (wholesalers, exporters, etc.) are involved. Ordinarily, this type of discrepancy is insignificant in annual figures.

f. *"Direct" vs "Total" Commodity Export and Imports*—Export and import data do not include materials which are incorporated into other more finished products and exported or imported in finished form. Thus, by showing only direct exports and imports, the relation of exports to output and imports to apparent consumption for intermediate products is considerably understated.

g. *Used Commodities*—With a few exceptions, used or rebuilt commodities are classified in the same import or export codes as is new merchandise. Percentages are thus overstated to the extent that used or rebuilt products are significant in trade.

RELATED REPORTS

An Annual Current Industrial Report is published in this series. The annual report summarizes quarterly figures and incorporates all revisions in the series for both the current and the previous year, thus providing a single reference copy to replace the quarterly publications.

The Bureau of the Census also publishes reports on related products as follows:

Series	Frequency	Title
<i>Current Industrial Reports</i>		
M33E	Monthly	Nonferrous Castings
M33K	Monthly	Inventories of Brass and Copper Wire Mill Shapes
MA-33L	Annually	Insulated Wire and Cable
M3-1	Monthly	Manufacturers' Shipments, Inventories, and Orders

Foreign Trade Reports

FT-410	Monthly	U.S. Exports—Schedule B—Commodity by Country
IM 145-X	Monthly	U.S. Imports for Consumption and General Imports

Two New Reference Books from the Census Bureau

AGE SEARCH INFORMATION

The Census Bureau can provide authorized individuals with official transcripts of its population records from 1900 to the present that are useful for a variety of purposes—showing age, relationship, place of birth, citizenship, occupation, etc. This new manual explains what an age search can or cannot do, and suggests a variety of alternative Federal record sources. Useful to individuals, genealogists, and organizations that need such documents.

Issued May 1979, 37 pp. at \$1.70

TWENTY CENSUSES

Population and Housing Questions, 1790-1980

This volume replaces the Census Bureau's earlier Working Paper 39, now out of print. The new edition, which is limited to existing schedules and questionnaires open to the public as well as those closed under the 72-year confidentiality rule, not only reproduces each question found in every decennial census but also adds the enumerator's instructions for the various entries. Genealogists, historians, researchers, and other users of the manuscript censuses, in particular, will find this information useful.

Issued October 1979, 91 pp. at \$3.75
